To push your S1_NOTES.pdf file to GitHub using Git on Windows, we will use a tool called **Git Bash** (a special command prompt for Git).

Phase 1: The One-Time Setup (First Time Only)

If you have never used Git on your computer before, you need to do these two things first:

1. **Download Git:** Go to git-scm.com, download the installer for Windows, and install it. (Just keep clicking "Next" on the installer).

2. **Open Git Bash:** Press the **Windows Key** on your keyboard, type Git Bash, and press Enter. A black window will open.

o check which version of Git is installed on your Windows computer, follow these two simple steps:

1. Open **Git Bash**
2. Type the following command and press **Enter**

git --version

3. **Tell Git who you are:** Type these two lines into the black window, pressing Enter after each (replace with your actual name and GitHub email):

bash

git config --global user.name "Your Name"

git config --global user.email "your-github-email@example.com"

Use code with caution.

Phase 2: Create the Online Folder (GitHub)

1. Go to GitHub.com and log in.
2. Click the **+** icon in the top right and choose **New repository**.
3. Name it exactly: **S1MCA**
4. Keep it Public or Private (up to you).
5. **CRUCIAL:** Leave "Add a README file" **UNCHECKED**. (We want a completely blank repository).
6. Click **Create repository**.
7. You will see a page with a web address (URL) that looks like https://github.com. **Keep this page open!**

Phase 3: Push Your PDF Using Git

Now, let's go back to your computer.

1. **Put your file in a folder:** Create a new folder on your computer named S1MCA and move your S1_NOTES.pdf inside it.
2. **Open Git Bash here:** Right-click inside that folder and select **"Git Bash Here"**.
3. **Run these exact commands** one by one:

- **Step 1: Turn this folder into a Git project**

bash

git init

Use code with caution.

- **Step 2: Tell Git to look at your PDF file**

bash

git add S1_NOTES.pdf

Use code with caution.

- **Step 3: Pack the file and write a save note**

bash

git commit -m "Added S1 Notes PDF"

Use code with caution.

- **Step 4: Rename your main branch (standard practice)**

bash

git branch -M main

Use code with caution.

- **Step 5: Link your computer folder to your online GitHub folder**
  (Copy your specific URL from the GitHub website page you left open)

bash

git remote add origin https://github.com

Use code with caution.

- **Step 6: Send the file to GitHub!**

bash

git push -u origin main

Use code with caution.

Note: The very first time you do Step 6, a window will pop up asking you to sign in to GitHub to give Git permission. Just click **"Sign in with your browser"** and authorize it.

Refresh your GitHub website page, and you will see your **S1_NOTES.pdf** sitting safely in your **S1MCA** repository!
